

Global Turnkey Company Profile

EPC and industrial services

Crude oil and petroleum products trading

Petrochemicals and solvents

Global Combined Company

Global Turnkey for Projects Management

We support industrial projects and supply requirements through project planning, technical procurement, energy trading and coordinated delivery.

Kuwait and Egypt | October 2026

Who we are

Connecting industrial requirements with technical and commercial solutions.

Our business

We bring together industrial project services, equipment procurement and energy trading. Global Turnkey supports clients from initial planning and supplier selection through implementation, delivery and operational supply.

Our markets

Our commercial focus connects Kuwait and Egypt with international supply markets. Oil trading activities cover non-Kuwaiti crude oil and petroleum derivatives outside the State of Kuwait.

Our purpose

We help clients translate technical and commercial requirements into a clear scope, suitable sourcing options and coordinated delivery. Our priorities are product suitability, transparent communication, realistic schedules and long-term business relationships.

How we work

We define specifications, evaluate suppliers, agree scope and commercial terms, and coordinate inspection and delivery. Implementation and follow-up support are tailored to the contracted requirements.

Business activities

A connected portfolio across projects, energy, chemicals and industrial operations.

EPC and project management

Engineering, procurement, construction coordination, commissioning support, feasibility studies and industrial project development.

Crude oil, petroleum products and industrial commodities

Commercial sourcing and trading of non-Kuwaiti crude oil, petroleum derivatives, bitumen, sulphur, petroleum coke and coal, subject to agreed specifications and delivery terms.

Petrochemicals, solvents and oilfield chemicals

White Spirit D40/D80, hydrocarbon streams, industrial chemicals, oilfield chemicals and drilling-fluid requirements, together with treatment and production-line support.

Running industrial operations

Blending, treatment, standardization, storage and dispatch activities supported by dedicated production and reaction units and third-party inspection where required.

Petroleum-services manufacturing

Manufacturing and development of downhole tools, cementing accessories and selected drilling-related components for local and export markets.

Industrial development and investment opportunities

Laboratory development, spent-catalyst treatment and metals recovery, drill-bit manufacturing, renewable-energy systems and other industrial projects under technical and commercial development.

Crude oil and petroleum products

Commercial requirements defined by product, specifications, quantity and delivery terms.

Crude oil

We coordinate sourcing and trading enquiries for non-Kuwaiti crude oil, including Basrah Medium. Each enquiry specifies the grade, origin, volume, delivery location and commercial terms.

Petroleum products

Our product scope includes gasoline, diesel and gasoil, fuel oil, kerosene and naphtha. Supply enquiries are assessed against the required quality specification, available product and delivery schedule.

Commercial coordination

We coordinate buyer and supplier requirements, quotation or offer review, contract discussions and shipment documentation within the agreed role. Inspection, shipping and title-transfer responsibilities are defined in the contract.

Send a trading enquiry

Please specify: product and grade; quantity; required quality specification; destination; delivery window; delivery basis; payment terms; and buyer company details.

Registered activity 466124 covers buying and selling non-Kuwaiti oil and its derivatives outside Kuwait.

TRADING ACTIVITIES

Petroleum products & industrial commodities trading

Commercial sourcing and supply aligned to buyer specification, quality requirements, destination and agreed delivery terms.

Diesel / Gasoil

Trading enquiries include diesel grades such as 5000 ppm sulphur, subject to confirmed specification, origin, quantity, inspection and delivery basis.

Bitumen

Supply and trading of bitumen against the required penetration or performance grade and logistics requirements. This is presented as a trading activity, not bitumen production.

Sulphur

Commercial sourcing and supply of sulphur for industrial and downstream applications, subject to grade, quantity, origin and destination.

Petroleum coke & coal

Commercial sourcing for approved industrial uses where technically, commercially and legally applicable.

Commercial coordination

- **Specification first**
Quality, sulphur level, quantity and destination are defined before sourcing.
- **Inspection**
Third-party inspection can be coordinated where required.
- **Documentation**
Contracts, certificates, shipping documentation and delivery responsibilities are aligned to the agreed role.
- **Market coverage**
Egypt, Kuwait, GCC, Africa and international trading channels.

Petrochemicals and solvents

Products and raw materials for manufacturing and processing applications.

Solvents and industrial chemicals

Petroleum solvents, including white spirit requirements such as D40 and D80, organic solvents and thinners, industrial chemicals, coatings-related materials and process raw materials.

Oilfield chemicals and drilling fluids

Chemical and drilling-fluid requirements for oilfield applications, with product selection based on the intended use and agreed technical specification.

Production and processing projects

Support for solvent, chemical, industrial detergent, coating and used-oil processing project requirements, including equipment selection and production-line coordination.

Product documentation

Specifications, certificates of analysis and safety data sheets are requested as appropriate. Packaging, handling, storage and delivery conditions are confirmed for each order.

EPC and industrial development

From feasibility and planning to equipment, installation and commissioning support.

Planning and feasibility

Industrial feasibility studies, project planning, technical scope development and investment-opportunity assessment.

Engineering and procurement

Equipment selection, supplier evaluation, production-line sourcing and coordination of engineering and procurement deliverables.

Implementation and commissioning

Installation coordination, inspection, commissioning support and operator training according to the contracted scope.

Industrial sectors

Metal, aluminium, glass, wood, petrochemical, chemical, recycling, food, mining, medical, electronics and smart industrial projects.

Delivery model

Work packages, technical responsibilities, acceptance criteria and aftersales arrangements are agreed before execution.

REFERENCE PROJECT

Kuwait New Airport - ACP Cladding Works

Aluminium Composite Panel (ACP) cladding and custom-made aluminium systems - executed in 2019.

EXECUTED PROJECT - 2019

Kuwait New Airport | Aluminium Composite Panel

Location	Kuwait New Airport
Scope	Aluminium Composite Panel (ACP) cladding & aluminium systems
Reported Area	Approx. 1,150,000 m²
Material	Unique special material - custom made for the project
Execution Year	2019
Status	Completed / reference project

Project reference presented using site images supplied by Global Turnkey.

INDUSTRIAL MANUFACTURING

Industrial fabrication, tubes & equipment

Manufacturing and industrial-investment activities supporting process plants, utilities and specialist fabrication.

Current / target industrial scope

- Shell-and-tube heat exchangers, tube bundles, retubing and related tube works.
- Chiller packages and industrial cooling / process-utility equipment.
- Fiberglass / GRP industrial products and corrosion-resistant fabricated items.
- Laser cutting and precision metal fabrication for industrial components.
- Boiler tubes, U-tubes, process piping items and specialist materials.
- ACP, aluminium and metal systems within the wider industrial project portfolio.

Petrochemical, blending and treatment operations

Current operating activities and identified production capacities from the EPGI platform.

Blending capacity

Two 15-ton blending units support formulation, mixing and downstream product preparation for hydrocarbon and petrochemical products.

Treatment / reaction capacity

Three 25-ton direct-heat treatment / reaction units support product treatment, standardization and selected processing operations.

Current product scope

White Spirit D40/D80, VGO, SN 500, SN 300, SN 150, SN 50/70, fuel-oil grades, scavengers, corrosion and scale inhibitors, emulsifiers, demulsifiers and diesel dearomatizing operations.

Operating model

Receive raw materials or intermediate streams, treat or blend to the agreed specification, inspect and standardize the product, then move it to storage, packing or dispatch.

Quality and inspection

Specifications, certificates of analysis and safety documentation are coordinated for each product. Third-party inspection can be arranged where required by the contract or customer.

RUNNING OPERATIONS

Global Lubricants - operating brand in Egypt

Engine-oil and lubricant activities presented within the company's running operations and industrial product portfolio.

Product scope

Automotive engine oils and lubricant products, including metal-can formats in 1 L and 3.7 L sizes. Base-oil activities include SN150, SN300 and SN500 grades, subject to final specification and market requirements.

Operating positioning

Global Lubricants is presented as an active brand in Egypt and part of the company's current lubricant operations.

Petroleum-services manufacturing platform

Downhole tools, cementing accessories and drilling-related manufacturing development.

Industrial footprint

The EPGI manufacturing platform identifies an approximately 2,800 sqm industrial footprint in Beni Suef for petroleum-services manufacturing and related workshop activities.

Product range

Float and reamer shoes, float collars, top and bottom plugs, centralizers, stop collars, packers and cementing accessories are included in the manufacturing platform.

Annual production targets

EPGI annual estimates include 1,200 float / reamer shoes, 1,200 float collars, 1,200 top / bottom plugs and 3,000 centralizers / stop collars. These figures are presented as platform production targets.

Export orientation

The platform is designed to serve Egyptian, African and international oil-and-gas markets, including export channels through free-zone distribution.

Drill-bit development

A separate project is under development to establish manufacturing capability for drill bits / drilling heads and selected drilling-tool components.

Storage, treatment and logistics platform

Integrated storage, packing, inspection and distribution support for industrial and petroleum products.

Local storage platform

EPGI identifies six underground steel tanks with a stated 4,000-ton capacity and thirteen ground tanks with a stated overall capacity of 12,000 tons.

Treatment and storage integration

Petrochemical materials can be received, treated or blended to specification, then transferred to storage before local delivery or export distribution.

Packing and distribution

The operating concept includes Flexi-bag, IBC and barrel packing options, together with warehouse and distribution support.

Third-party operations

Selected storage and treatment activities may be carried out with certified third-party operators where appropriate to the product, contract and site conditions.

Free-zone development

The wider development concept includes a 12,000-ton free-zone tank-farm and distribution platform for international trading, re-export and long-term logistics support.

Industrial development and investment opportunities

Projects under technical, commercial and investment development - separate from running operations.

Industrial laboratory

Development of an industrial laboratory to support product testing, quality control, formulation work, inspection preparation and technical acceptance.

Spent-catalyst treatment and metals recovery

Development of treatment, regeneration and recycling routes for spent catalyst, including recovery of valuable metallic and non-metallic materials such as molybdenum where technically and commercially viable.

Drill bits and drilling heads

Development of a manufacturing project for drill bits / drilling heads and associated petroleum-service components, including process selection, machinery, tooling and quality requirements.

Feasibility and project development

Industrial feasibility studies, technical scope development, production-line selection, supplier evaluation, OEM sourcing and investment-opportunity assessment are carried out before execution.

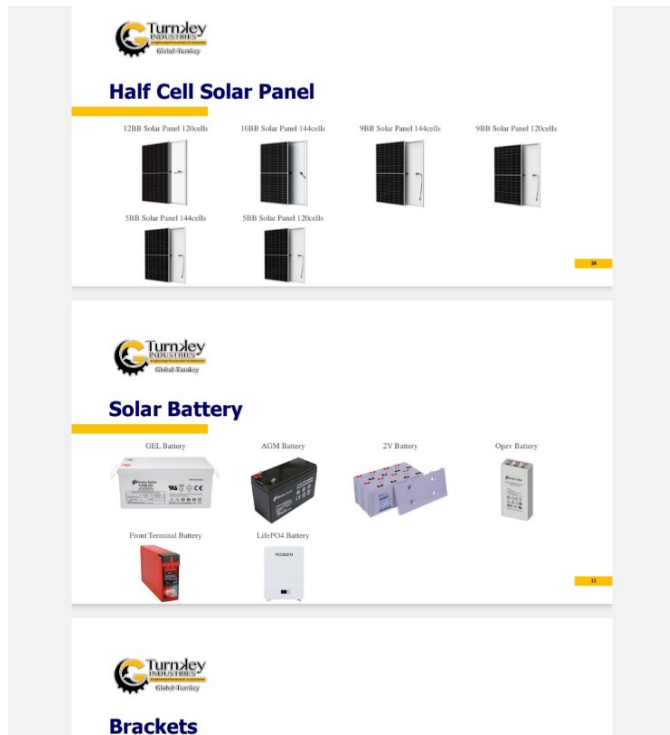

Renewable and industrial energy systems

Solar systems and selected industrial-energy projects form part of the wider project-development portfolio. Detailed project references and images will be added as project information is finalized.

ENERGY PROJECTS

Solar energy solutions

Integrated solar-energy activity covering PV systems, modules, storage, batteries and mounting structures.

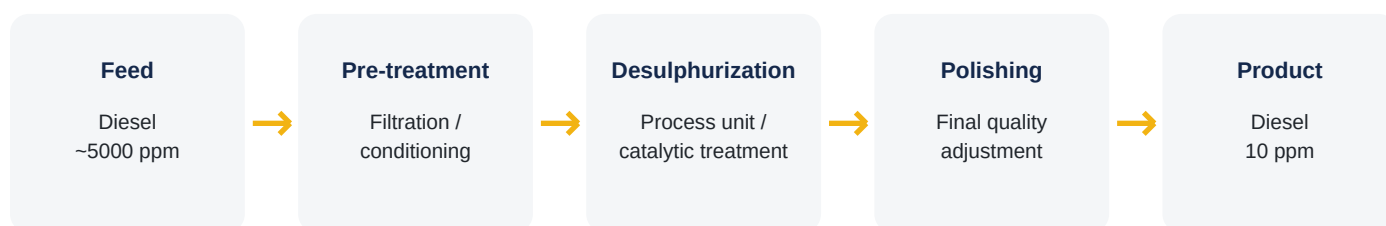

Activity coverage

- On-grid, off-grid and hybrid solar power systems.
- Half-cell PV modules and project-specific panel configurations.
- Solar batteries and energy-storage solutions.
- Rooftop, ground-mount, pole-mount and solar-carport structures.
- Rails, brackets, structural accessories, supply and project implementation.

INVESTMENT OPPORTUNITY

Proposed Oman diesel-upgrading unit

Proposed project for upgrading high-sulphur diesel from approximately 5000 ppm sulphur to 10 ppm, subject to technical validation, feedstock confirmation and project economics.

Development status

The project is positioned under Investment Opportunities / Projects Under Development. Key workstreams include technology selection, feedstock analysis, product specification confirmation, catalyst and utility requirements, site selection in Oman, permitting, CAPEX/OPEX development, third-party inspection strategy and off-take assessment.

Commercial link

The development supports the company's diesel trading activity by creating a potential route from higher-sulphur feed to 10 ppm product for markets requiring lower sulphur specifications.

MRO and industrial supply

Maintenance, repair and operations materials tailored to the application.

Spare parts and consumables

Bearings, seals, gaskets, belts, motors, pumps, electrical components, adhesives, cleaning agents, welding consumables, lubricants and hydraulic fluids.

Tools, safety and hardware

Hand and power tools, measuring instruments, lifting and rigging equipment, PPE, fasteners and assembly hardware.

Valves and flow control

Gate, globe, ball, check, butterfly and plug valves selected by service conditions, material, pressure class, connection and control requirements.

Boiler tubes, pipes and fittings

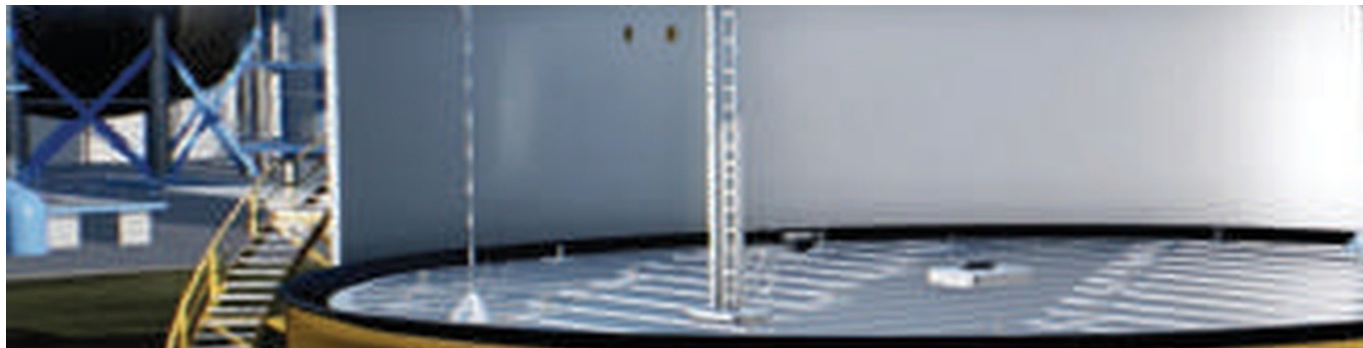

Seamless and welded boiler tubes and pipes, U-tubes, elbows, return bends, stub ends, end caps and long- or short-radius bends.

Filtration systems

HVAC, HEPA and industrial air filters; engine and hydraulic oil filters; compressed-air and liquid coalescers; fuel filters; and process filtration requirements.

Tank systems and spare parts

Components for storage integrity, operation and maintenance.

Floating roof systems

Internal and external floating roof components, pontoons, primary and secondary rim seals, wiper seals and associated spares.

Drainage and covers

Floating roof drain pipes, drain seals and associated components; aluminium dome covers, gaskets, bolts and vents.

Tank fittings

Flanges, couplings, valves, gauges, level indicators and other fittings selected for the tank design and stored product.

Maintenance support

Storage-tank repair, cleaning and coating requirements coordinated with the appropriate technical scope and service conditions.

Corrosion control and protection

Surface preparation, protective systems and industrial insulation.

Protective coatings and linings

Tank linings, pipeline coatings and protective coating systems selected for the substrate, operating environment and chemical exposure.

Bund lining and repairs

Resin-based containment linings, epoxy systems and glass-reinforced lining requirements for secondary containment areas.

Industrial floors and markings

Epoxy floors, warehouse marking, industrial identification, equipment painting and coatings for driveways or high-traffic areas.

Thermal insulation

Insulation requirements for process piping, hot-water systems, refrigeration lines and industrial equipment.

Execution planning

Surface condition, preparation method, coating specification, inspection points and site safety requirements are defined for each job.

Process equipment and specialist services

Equipment sourcing and fabrication coordination for demanding industrial applications.

Process equipment

Heat exchangers, reactor vessels, condensers, chemical mixers, columns, towers, storage tanks, air preheaters, air bundles and heating or cooling coils.

Special materials

Sourcing requirements for titanium, nickel alloys, Monel, Hastelloy, zirconium, Inconel, tantalum, duplex steel, stainless steel and other specified materials.

Electroplating equipment

Anode baskets, titanium or zirconium coils, lined or clad vessels and allied equipment selected against process requirements.

Specialist repair services

Heat-exchanger retubing, specialist pipe fabrication and welding, exotic-metal equipment repairs and tank lining requirements.

Technical acceptance

Applicable design codes, material certification, welding requirements and inspection arrangements are agreed with the client and executing supplier.

Strategic sourcing and delivery

Procurement planning that supports continuity and practical cost control.

Supplier and OEM sourcing

Evaluate suitable manufacturers, OEMs, authorised agents and distributors. Compare technical compliance, commercial terms and delivery schedules.

Inventory analysis

VED: vital, essential and desirable items. HML: high, medium and low unit-value items. SDE: scarce, difficult and easily available items.

Recurring supply and warehousing

Blanket purchasing, recurring-item stock planning and onsite warehouse arrangements where agreed, supported by consumption and replenishment analysis.

Inspection and logistics

Coordinate material checks, packing, documentation and transport planning. Third-party inspection requirements are agreed where needed.

Manufacturing and industrial systems

The wider portfolio includes ACP lines, containers and mobile kitchens, solar systems, steel structures, metal works, aluminium / UPVC systems, industrial access systems and water-treatment equipment.
